| | dan Hrycaj tware Engineer - Contractor | | Add profile section 🤝 | More |
| | Stig Køhler Experienced Software Manager May 7, 2018, Stig managed Jordan directly | Jordan Hrycaj has been working with us at Cobham SATCOM since summer 2017 as a contractor. He is a dedicated and motivated software engineer who fits well into our development team. He has used his broad experience and analytic skills to adapt and augment off-the-shelf cryptographic software for embedded communication systems towards our needs. He has introduced techniques for structured cross development, unit testing, and regression testing which will be helpful for wider applications in the future. Jordan will stay with us for some more time to help us with Linux hardening work for security purpose – and to share his knowledge with the team members. I don't hesitate to give Jordan my warmest recommendation. | | |
| T | Michael Christodoulides Cyber security, Information Risk and Technology Manager specialising in payment, data and information security July 9, 2015, Michael worked with Jordan in different groups | Jordan is a software engineer who, amongst other skills, applies his pure logic and the discipline of mathematics to produce bespoke programme code for forensically valid applications. I was fortunate to have been a colleague of Jordan and admired his integrity and hunger to create solutions that others claimed was not possible. Jordan always provided me with excellent technical support delivered with patience and an understanding of my situation. In my experience Jordan's attention to detail is unsurpassed and I would recommend Jordan to software engineering projects where | | |
| | David Grove Rapidly expanding a Technical Security team across the UK (and beyond) June 30, 2015, David managed Jordan directly | only the best is good enough. Either working alone or in a small team, Jordan provides the motivation, drive and insight to push software development projects forward and produce deeply embedded applications that have proven invaluable in our consultancy services across all aspects of cyber security. He has a thirst for technical knowledge and enjoys uncovering the deep inner workings of operating systems, applications and file structures in order to ensure that he can develop applications that are forensically sound, efficient and above all accurate in locating | | |
| | | data across a range of devices. and platforms. He has also proven to be a fantastic mentor and line manager, ensuring that his passion is absorbed by those he works with. | | |
